Alliant Energy to Acquire 50 MW North Rock Solar Project

The Wisconsin utility company's contract allows Geronimo Energy to continue development and acquire the Rock County Solar Project post-approvals

Minneapolis, MN (May 26, 2020) – [Geronimo Energy](#) (Geronimo), a [National Grid](#) company, and [Alliant Energy](#) announced today the sale of North Rock Solar (North Rock) in Rock County, Wisconsin to Alliant Energy. Geronimo Energy will continue development activities until regulatory approvals and other contractual commitments are complete, at which time Alliant Energy will acquire North Rock.

North Rock will produce 50 megawatts (MW) of electricity, enough to power approximately 12,000 Wisconsin homes, and will contribute to Alliant's goal to build 1,000 MW of solar projects in Wisconsin by 2023. The 50 MW North Rock will be located in the town of Fulton, approximately 10 miles north of Janesville, and is estimated to have a footprint of 440 acres. The project is expected to begin construction in 2021, with anticipated completion in late 2022, and will bring positive economic benefits in the form of new tax revenue, local spending, and job creation to both local and state communities.

"As a midwestern-based U.S. renewable energy company, Geronimo Energy is proud to partner with Alliant Energy to bring additional clean energy to the Wisconsin electric grid," stated David Reamer, President for Geronimo Energy. "As a farmer-friendly and community-focused company, we believe both our land partners and the local community in the Town of Fulton are in excellent hands with the Alliant Energy team at the helm of North Rock Solar."

"We look forward to working with Geronimo Energy and Rock County as project development continues toward construction," stated Ben Lipari, Director of Resource Development at Alliant Energy. "The future of renewable energy in Wisconsin is bright. This project is an investment in a community where we have a long history of partnership, supporting customers and furthering economic growth. Our solar projects initiate significant tax revenue, establish reliable income for landowners and create new, local construction jobs."

This project sale is included in a 6-county, 675 MW solar [announcement](#) made by Alliant Energy earlier today in Wisconsin. Once operational, the energy from the six projects will be enough to power 175,000 homes per year. The 675 MW solar announcement is part of Alliant Energy's Clean Energy Blueprint, which outlines their roadmap to accelerate renewable energy, while reducing carbon emissions.
